## FastlightsLEDs Skinny'z Strip Cutting Instructions

Regardless of length of FastlightsLEDs strip that you have the sizing and cutting instructions are the same.

Skinny'z strips can be cut **EVERY THIRD BULB** starting from the either end where the wire connects to the light strip.

Use a **SHARP** pair of wire cutters or scissors and cut in the center between the bulbs as shown below. If done properly, you should not loose any LEDs and you will end up with two strips that can be used.
